

# Introduction

Current skill prediction support in game commands.

## Basic info

Main format: `/8 sp <command>`

Example: `/8 sp info`

Extended command format: `/8 sp <command> <subcommand>`

Example: `/8 sp config print`

## Commands

### Basic commands

- `info` - print basic info about current SP and configuration.
- `strictdef` - switch for showing Brawler's Perfect Block messages if not rightfully showing (please do remember that this can cause crashes at very high ping).
- `mount` - switch for blocking skills usage when mounting.
- `off` - disable SP. In addition to that, you should not be: mounting, in battle, dead or using a skill.
- `on` - enable SP. Same conditions from `sp off` likewise apply on this command.

### Extended commands

- Main command: `config`
- Sub commands:
  - `print` - print current SP configuration.
  - `generate` - generate automatic configuration based ping.
  - `reset` - discard current configuration saved in memory and loads default settings.
  - `reload` - reload the configuration file (for direct edits of settings).
  - `save` - save current configuration.
- Main command: `ping`
  - `log` - print ping history.
  - `<empty>` - print basic ping info (Ex: `/8 sp ping`).

### Debug commands

- `debug` - switch for debug mode (output will be displayed in the console).
- `debugloc` - switch for location debug mode (output will be displayed in the console).
- `debugabnorm` - switch for abnormals debug mode (output will be displayed in the console).
